CS 61B Discussion Quiz 1

Write your name and SID above. Detach this page from your discussion handout, and turn it in when your TA instructs you to do so. **These quizzes are used as attendance.**

Questions

1. Tell us a little about yourself.

2. What do you expect to learn from the course?

3. Please draw how you feel today in the box below. :)

This page is intentionally left blank.

1 Our First Java Program

Below is our first Java program of the semester. Next to each line, write out what you think the code will do when run. *This exercise is adapted from Head First Java.*

```
1 int size = 27;
2 String name = "Fido";
3 Dog myDog = new Dog(name, size);
4 int x = size - 5;
5 if (x < 15) {
6     myDog.bark(8);
7 }
8
9 while (x > 3) {
10     x -= 1;
11     myDog.play();
12 }
13
14 int[] numList = {2, 4, 6, 8};
15 System.out.print("Hello ");
16 System.out.println("Dog: " + name);
17
18 System.out.println(numList[1]);
19 if (numList[3] == 8) {
20     System.out.println("potato");
21 }
```

2 Mystery

This is a function (a.k.a. method). It takes an array of integers and an integer as arguments, and returns an integer.

```
1 public static int mystery(int[] inputArray, int k) {
2     int x = inputArray[k];
3     int answer = k;
4     int index = k + 1;
5     while (index < inputArray.length) {
6         if (inputArray[index] < x) {
7             x = inputArray[index];
8             answer = index;
9         }
10        index = index + 1;
11    }
12    return answer;
13 }
```

Describe in English what mystery returns if `inputArray = [3, 0, 4, 6, 3]` and `k = 2`.

Extra: This is another function. It takes an array of integers and returns nothing.

```
1 public static void mystery2(int[] inputArray) {
2     int index = 0;
3     while (index < inputArray.length) {
4         int targetIndex = mystery(inputArray, index);
5         int temp = inputArray[targetIndex];
6         inputArray[targetIndex] = inputArray[index];
7         inputArray[index] = temp;
8         index = index + 1;
9     }
10 }
```

Describe what `mystery2` does if `inputArray = [3, 0, 4, 6, 3]`.

3 Writing Your First Program

Implement `fib` which takes in an integer n and returns the n th Fibonacci number.

The Fibonacci sequence is 0, 1, 1, 2, 3, 5, 8, 13, 21, ...

```
public static int fib(int n) {
```

```
}
```

Extra: Implement `fib` in 5 lines or fewer. Your answer must be efficient.

```
public static int fib2(int n, int k, int f0, int f1) {
```

```
}
```
